

PUBLIC COMMENT PERIOD

on Time Critical Work Plans for the Kingston Fossil Plant Ash Recovery Site

The Tennessee Valley Authority is working with the Environmental Protection Agency to recover the site of the Kingston Fossil Plant ash spill. As part of that process, important site documents are placed in the Administrative Record and are available for public review. Documents in the Administrative Record include, but are not limited to, correspondence, inspection reports, test results, the Action Memorandum, and work plans. All interested persons are encouraged to review and comment on the documents.

The following work plans regarding Time Critical Removal Actions (actions taken to remove the ash from the river and from the area east of Dike 2) have recently been placed in the Administrative Record and are available for public review and comment:

Removal of Cantilevered Sheet Piling Wall Work Plan:

This work plan outlines the method used to remove the cantilevered sheet piling which is installed along the western boundary of the Rim Ditch. The wall was designed by Glynn Geotechnical Engineering and installed by Severson Environmental Services (Severson) during the summer of 2009.

Support Services Equipment Demobilization Work Plan:

This work plan outlines the strategy taken to demobilize the support service equipment and facilities from Severson's site-wide operations. These facilities include office trailers, a maintenance shed, CONEX boxes (large portable storage containers) and miscellaneous small equipment and materials stored around the site. The demobilization will occur over time. Equipment will be removed from the site as it is no longer needed.

Cenosphere Recovery Demobilization Work Plan:

This work plan outlines the strategy taken to demobilize the cenosphere recovery team, which includes Southern Waste Services, and TVA equipment. River-based equipment such as boats, barge-mounted vacuum units and barges will be demobilized from the Kingston Fossil Plant south boat ramp on the Clinch River. The demobilization will occur over time. Equipment will be removed from the site as it is no longer needed.

Dike 2 Remediation Work Plan:

The purpose of this work is to improve the appearance and to fortify Dike 2. This will be accomplished by placing a combination of riprap and soil on the out-slope of Dike 2 and then seeding the soil. Crusher run material will be placed on the surface of the dike to slope the dike toward the settling pond.

Site documents can be read and reviewed at the following locations:

TVA Outreach Center
509 N. Kentucky Street
Kingston, Tennessee
(865) 632-1700

Kingston Public Library
1004 Bradford Way
Kingston, Tennessee
(865) 376-9905

These same documents are available on computer disk at the following location:

Harriman Public Library
601 Walden Street
Harriman, Tennessee
(865) 882-3195

The Administrative Record is also available online at: www.tva.gov/kingston.

TVA welcomes your comments on this document. A 30-day public comment period begins on September 13, 2010, and ends on October 13, 2010. Please submit comments on this document to:

TVA
P.O. Box 40
Kingston TN 37763-0040
ATTN: Kingston Public Comments

Or email your comments to: kingstoncomm@tva.gov.

After the 30-day comment period, a written response to all pertinent comments will be prepared in a responsiveness summary and placed in the Administrative Record.
